Plate

- I. Map showing position of the principal interglacial fresh-water deposits in Jutland, Funen and adjacent islands.
- II. Herning Brickworks. Map of the interglacial lake.
- III. — — Profile of the northern wall of the clay pit.
- IV. — — Photograph of the west wall of the clay pit.
- V. — — Detail — —
- VI. — — — —
- VII. — — — —
- VIII. — — Longitudinal profile of the interglacial lake deposits.
- IX. — — Transverse profile of the interglacial lake deposits.
- X. Nörbölling. Photograph of the depression above the interglacial bog.
- XI. — Profiles and map of the interglacial deposits.
- XII. Brörup Hotel Bog. Photograph of the depression above the interglacial bog.
- XIII. — — Profile and map.
- XIV. Rodebæk I. Photograph of the depression above the interglacial bog.
- XV. — Profiles and map of the interglacial deposits.
- XVI. Solsö. Photographs of the eastern end of the lake.
- XVII. — Profiles and map of the interglacial deposits.
- XVIII, 1. Duedam I. Photograph of the depression above the interglacial bog.
- XVIII, 2. Rodebæk II. Photographs of the depression above the interglacial bog.
- XIX, 1. Fövling. Photograph of the depression above the interglacial bog.
- XIX, 2. Over Gestrup. Photograph of the depression above the interglacial bog.
- XX, 1. Rind. Diluvial gravel above the interglacial marl.
- XX, 2. Harreskov. Upper part of the covering strata above the interglacial mud.
- XXI. — Boring profiles and map.
- XXII. — Profile of the interglacial deposits.
- XXIII, 1. Lövskal. Profile of the interglacial ochre bed.
- XXIII, 2. Egtved. Profile of the interglacial deposits.
- XXIV. Solsö. Map showing method of calculation the solifluction.
- XXV. Maps illustrating the imaginary transformation of a young-glacial Landscape.
- XXVI, 1. Römstedt I. Photograph of the depression above the interglacial bog.
- XXVI, 2. Neu-Ohe I. Photograph of the kieselgur-pit.

Plate

- XXVII, 1. Römstedt I. Profile of the interglacial bog.
 XXVII, 2. — II. — —
 XXVII, 3. Map showing the situation of the interglacial bogs Römstedt I and Römstedt II.
 XXVIII. Ober Ohe. Photograph from the kieselgur-pit.
 XXIX. Neu-Ohe I. Photograph from the kieselgur-pit.
 XXX. — II. — —
 XXXI. Plants from various interglacial deposits.
 XXXII. — — —
 XXXIII. — — —
 XXXIV. — — —
 XXXV. — — —
 XXXVI. Pollen diagrams from interglacial deposits of the Herning-type.
 XXXVII. Pollen diagrams from interglacial bogs of the Brörup-type in Jutland.
 XXXVIII. Pollen diagrams from deposits from the Penultimate interglacial period.
 XXXIX. Pollen diagrams from interglacial deposits in Jutland covered by young glacial formations.
 XXXX. Pollen diagrams from interglacial deposits in Northwest Germany.

List of the plant species figured in Plates XXXI—XXXV.

<i>Acer campestre</i>	XXXI. 17—21
— <i>platanoides</i>	XXXI. 22
<i>Betula nana</i>	XXXV. 9—14, 16—18
— — <i>×</i> <i>pubescens</i>	XXXV. 15, 19—20
— <i>pendula</i>	XXXV. 1 5
— <i>cf. pendula</i> <i>×</i> <i>pubescens</i>	XXXV. 6
— <i>pubescens</i>	XXXV. 7—8
<i>Carex caespitosa</i>	XXXV. 21—22
— <i>pseudocyperus</i>	XXXV. 25
— <i>sp.</i>	XXXV. 23—24
<i>Ceratophyllum demersum</i>	XXXI. 23—25
— — — <i>var. apiculatum</i>	XXXI. 26—28
— <i>submersum</i>	XXXI. 29—32
<i>Eriophorum vaginatum</i>	XXXII. 10—12
<i>Hypochaeris radicata</i>	XXXII. 1
<i>Litorella uniflora</i>	XXXII. 8—9
<i>Montia lamprosperma</i>	XXXII. 7
<i>Myosoton aquaticum</i>	XXXII. 15
<i>Myriophyllum alterniflorum</i>	XXXII. 4—6
— <i>verticillatum</i>	XXXII. 2—3
<i>Najas flexilis</i>	XXXIII. 6—9
<i>Nasturtium aquaticum</i>	XXXV. 26—28
<i>Oenanthe</i> <i>sp.</i>	XXXII. 20.
<i>Cf. Origanum vulgare</i>	XXXIV. 10—11
<i>Oxycoccus palustris</i>	XXXII. 13—14
<i>Potamogeton alpinus</i>	XXXIII. 14—16
— <i>densus</i>	XXXII. 22
— <i>filiformis</i>	XXXIII. 10—11

<i>Potamogeton natans</i>	XXXII. 27—28
— <i>praelongus</i>	XXXIII. 12—13
— <i>pusillus</i>	XXXIII. 17—20
— <i>trichoides</i>	XXXII. 23—26
<i>Ranunculus lingua</i>	XXXII. 16—18
<i>Rhynchospora alba</i>	XXXII. 21
<i>Salix herbacea</i>	XXXIV. 1—3
— <i>phylicifolia</i>	XXXIV. 5—6
— <i>cf. repens</i>	XXXIV. 7—8
— <i>reticulata</i>	XXXIV. 9
<i>Scleranthus perennis</i> ?	XXXII. 19
<i>Sparganium affine</i>	XXXIII. 26—31
— <i>minimum</i>	XXXIII. 22—25
— <i>simplex</i>	XXXIII. 21
<i>Tilia platyphylла</i>	XXXIII. 1—5
<i>Trapa natans</i>	XXXI. 1—16.
<i>Trichocolea tomentella</i>	XXXV. 29—30

Plate I.

Plate I.

Map showing the position of the principal interglacial fresh-water deposits in Jutland, Funen and adjacent islands. The limit of last glaciation is marked on the map.

1. Deposits of the Brörup type and of the Herning Type. Last interglacial period. Nos. 1—29.
2. Fresh-water deposits occurring in conjunction with the dislocated Eem strata. Last interglacial period. Nos. 30—36.
3. Deposits from the penultimate interglacial period. Nos. 37—41.
4. Interglacial fresh-water deposits covered by formations from the last glaciation. Nos. 42—55.

The Interglacial Localities.

1. Herning Brickworks.	21. Lervad.	37. Rind.
2. Tiphede.	22. The Brörup-district,	38. Harreskov.
3. Solsö.	see Fig. 2, p. 63 in the	39. Starup.
4. Herborg I.	text.	40. Tirslund.
5. Herborg II.	23. Spandet.	41. Vejen.
6. Astrup.	24. Over Gestrup.	
7. Duedam I.	25. Agerskov.	42. Hörup.
8. Duedam II.	26. Two bogs in	43. Lövskal II.
9. Dalager Nygaard.	27. Emmerlev Cliff.	44. Lövskal I.
10. Dalager.	28. Mögeltönder.	45. Hollerup.
11. Sandfeld.	29. Westerland on Sylt.	46. Vellev.
12. Grönmose.		47. Rostrup.
13. Ringdal.	30. Stensigmose Cliff.	48. Vejle.
14. Rodebæk I.	31. Mommark.	49. Egtved.
15. Rodebæk II.	32. Horne Næs.	50. Trelde Næs.
16. Rodebæk III.	33. Bregninge Cliff.	51. Fredericia.
17. Höllund Søgaard.	34. Risemark Cliff.	52. Kolding.
18. Bramminge.	35. Vejsnæs Nakke.	53. Ejstrup.
19. Lundtofte.	36. Ristinge Cliff.	54. Kollund.
20. Fövling.		55. Frausing.

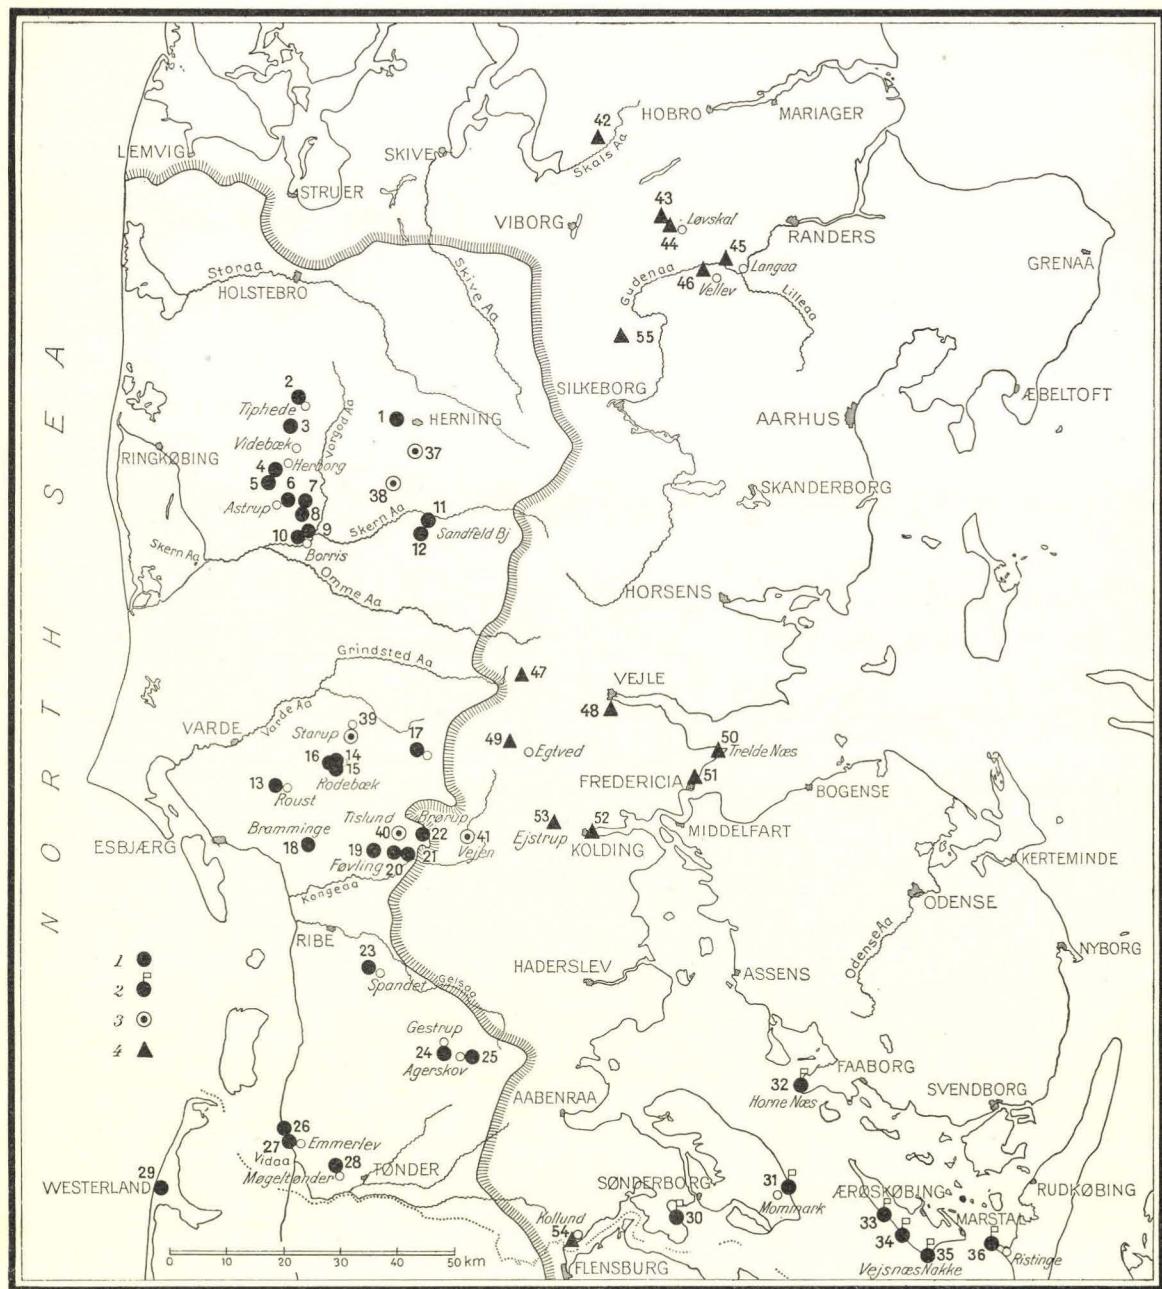

Plate II.

Plate II.

Map of the interglacial lake at Herning Brickworks, showing position of the borings, with their height above sea level. A—A longitudinal, B—B transverse section through the interglacial lake deposits, cf. Plates VIII and IX. Contour interval 0.5 m.

The Counterdraw.

—.---.— Limit of the Lower mud bed K₂.

—.---.— Upper — G.

△ △ △ Moraine clay forming the eastern side of the lake basin.

└ └ └ Stoneless clay forming the western side of the lake basin.

MAP OF THE INTERGLACIAL LAKE

HERNING BRICKWORKS

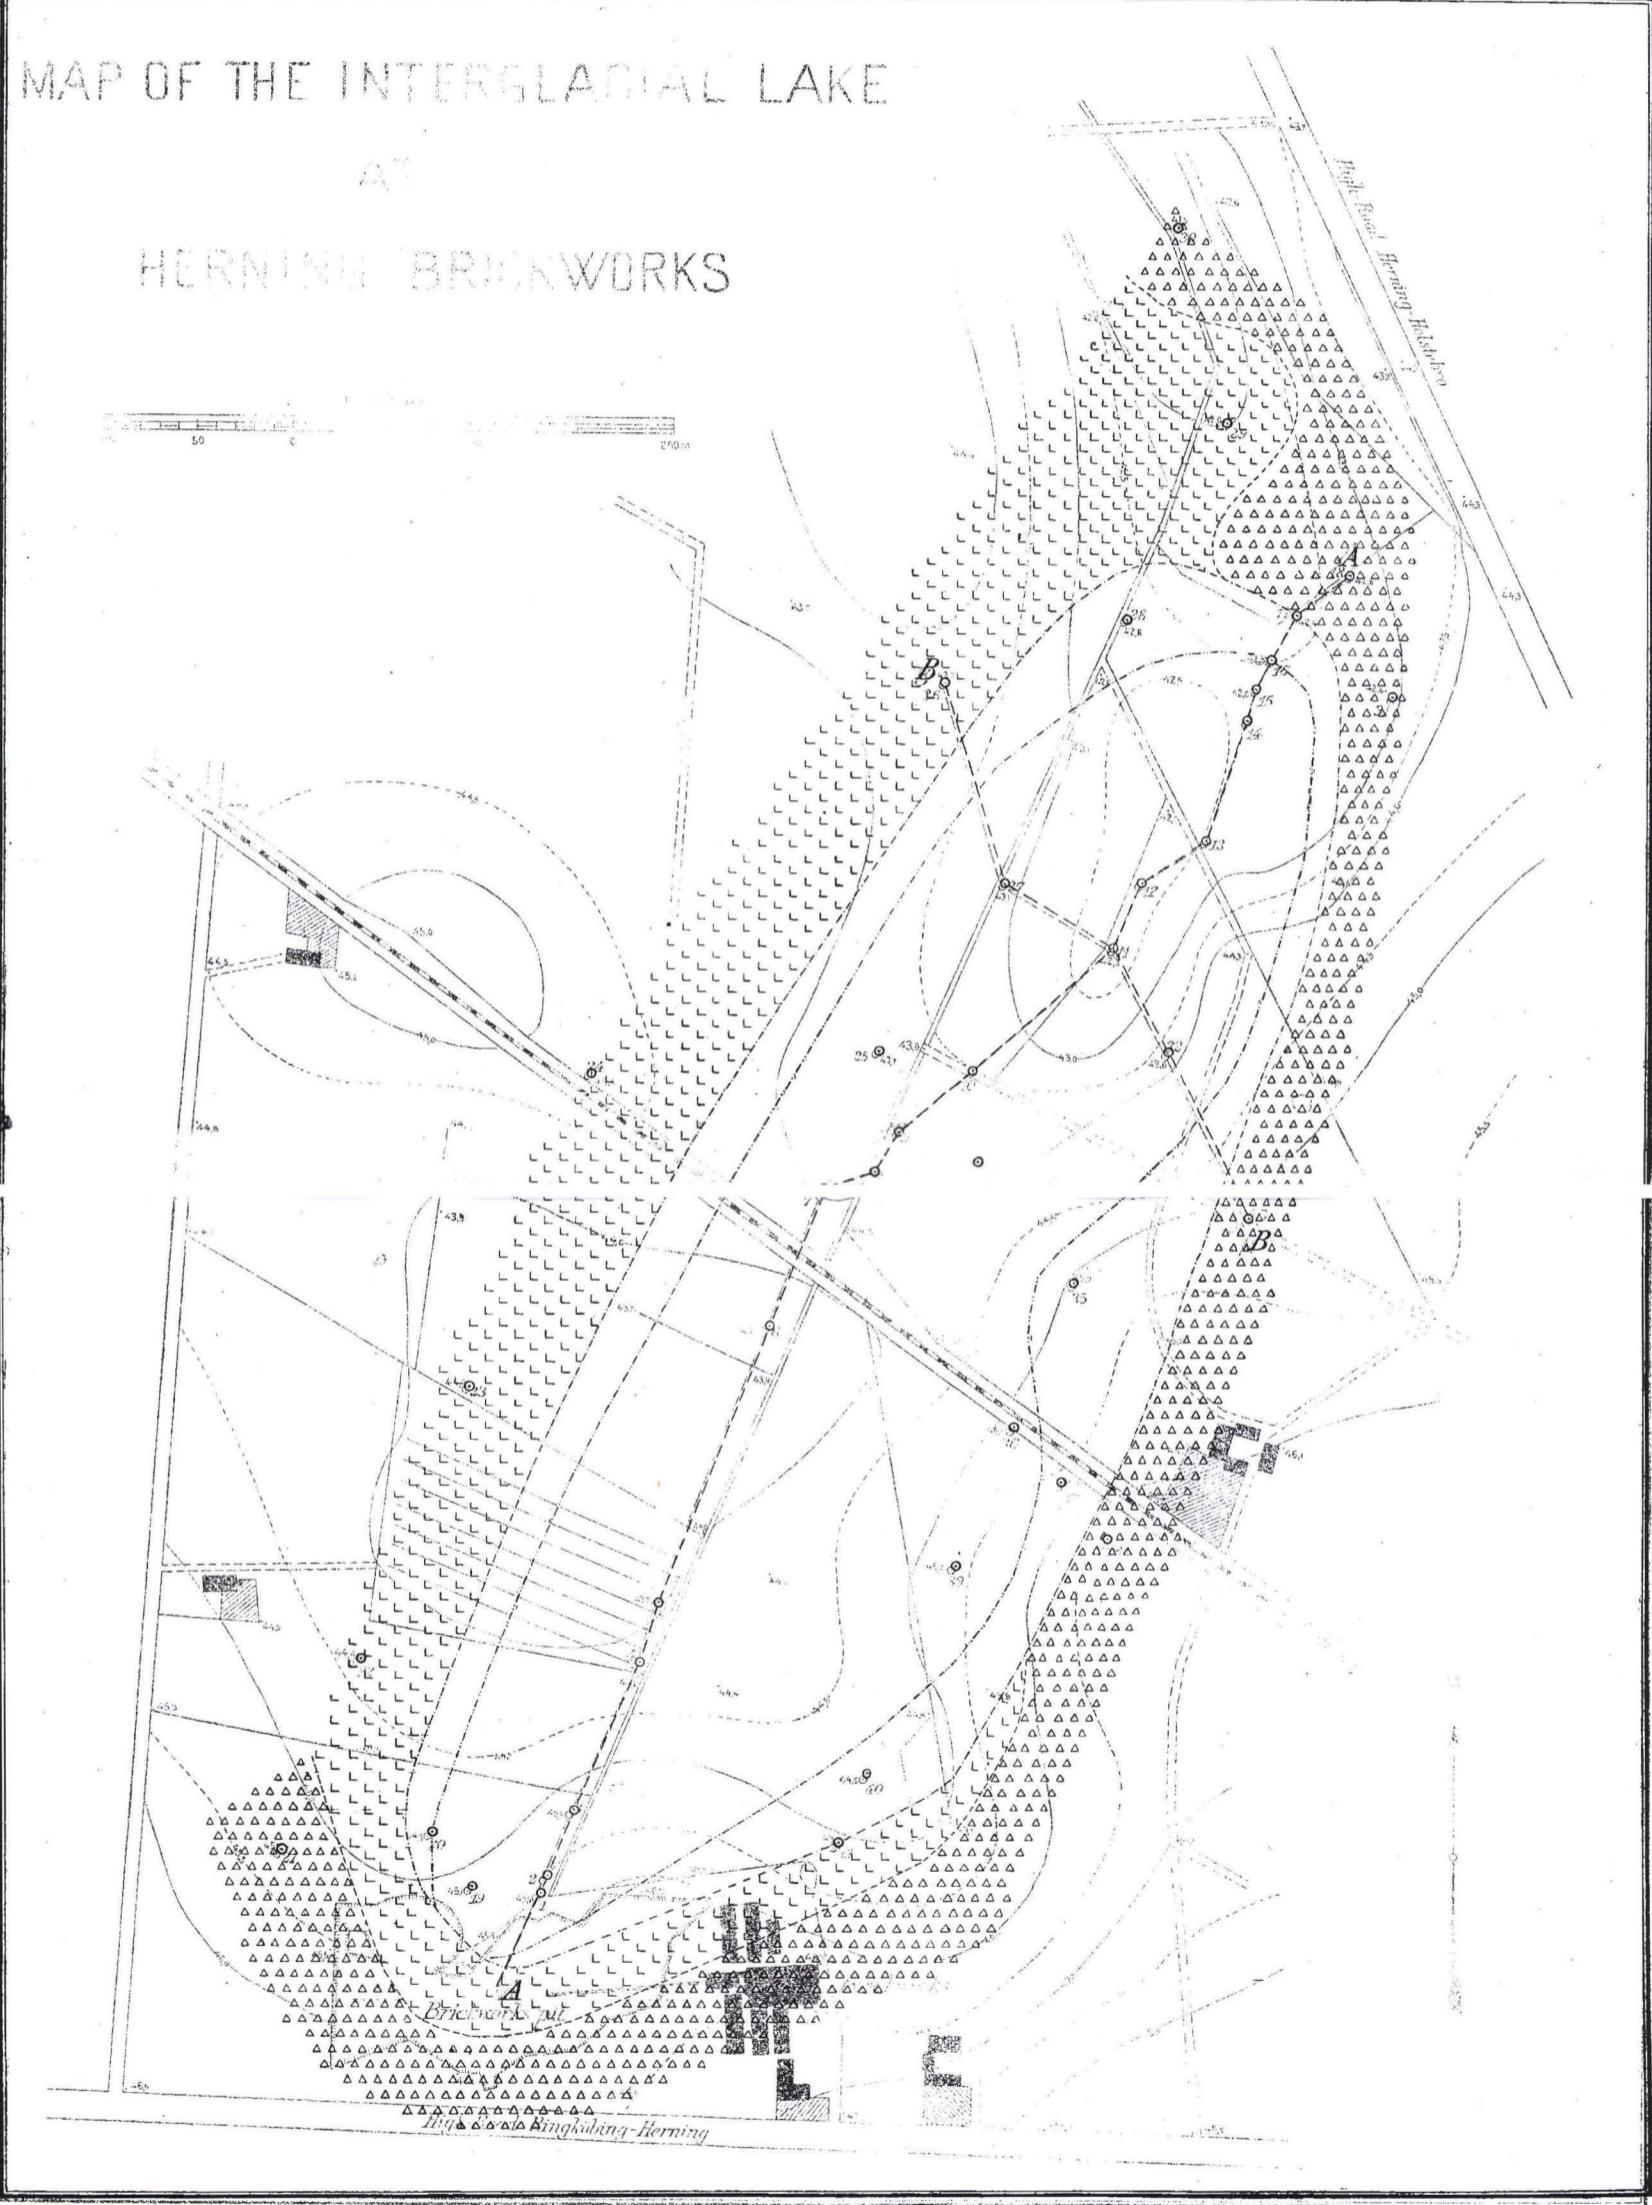

Plate III.

Plate III.

Profile of the western wall of the clay pit at Herning Brickworks 1914. Southernmost part of the profile line A—A, see Pl. II and VIII. South to the left.

- | | |
|--|---|
| A. Mould. | K ₁ . Light-coloured Sand. |
| B. Wind-blown Sand. | K ₂ . Mud-blended Sand (the <i>Trapa</i> and <i>Ceratophyllum</i> beds). |
| D. Stony Sand. | L. Arctic Clay. |
| E. Yellow stratified Sand, the upper part contorted. | M. Sand with mosses etc. |
| G. Mud-blended Sand. | N. Glacial varved Clay. |
| J. Stony, non-calcareous Clay. | O. Moraine Clay. |

- Fig. 29—30. *Trichocolea tomentella* (EHRH.), ciliated fringes from the edge of a leaf. $^{135}/_1$. Width of Threads, 13—26,7 μ . Rodebæk III. Text, p. 147.

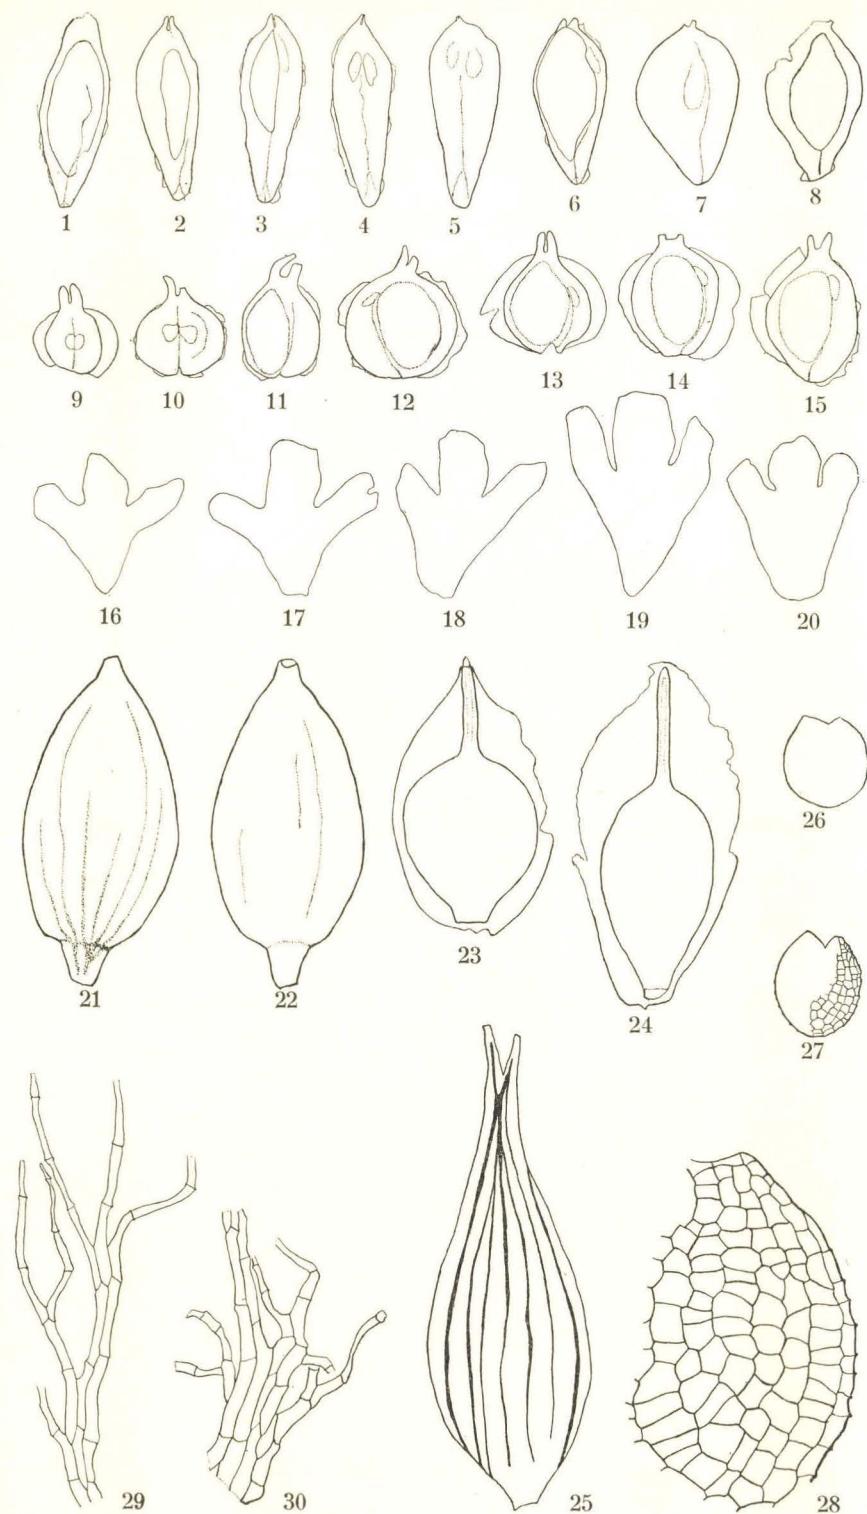

Plate XXXVI.

Pollen Diagrams from interglacial deposits of the Herning Type.

- Fig. 1. Herning. Boring 4. See Text, p. 24 and Pl. VIII.
Fig. 2. — — 9. — Text, p. 28 — Pl. VIII.
Fig. 3. Nörbølling. Boring 4. See Text, p. 64 and Pl. XI.
Fig. 4. — — 15. — Text, p. 71 — Pl. XI.
Fig. 5. — — 19. — Text, p. 72 — Pl. XI.
Fig. 6. — — 20. — Pl. XI.
Fig. 7. Brørup Hotel Bog. Boring 3. See Text, p. 83 and Pl. XIII.
Fig. 8. Rodebæk I. Boring 5. See Text, p. 92 and Pl. XV.
(Spectr. 17 is from Boring 3, 6.4 m below surface).

Explanations of Pollen Diagrams.

The letters in the column on the extreme left are those used in the profile descriptions in the text to denote the various strata.

The scale shows the distance in metres below the surface.

The different beds are indicated in the same way as in the profile drawings; see also descriptions of the strata in text.

For explanation of the signs referring to pollen, see below.

—⊕—	<i>Salix</i>
—○—	<i>Betula</i>
—●—	<i>Pinus</i>
.....	<i>Ulmus</i>
-----	<i>Tilia</i>
———	<i>Quercus</i>
■—■—	Mixed Oak Forest (<i>Quercus</i> + <i>Ulmus</i> + <i>Tilia</i>)
—□—	<i>Alnus</i>
—▽—	<i>Carpinus</i>
—△—	<i>Picea</i>
—×—	<i>Abies</i>
—□—	<i>Corylus</i>

A curve for pollen frequency (see text p. 12–13) is given on the right, inside the margin of the diagrams, the right side of which constitutes the abscissa.

The serial numbers of the pollen spectra, and the small letters denoting the floristic zones are placed outside the margin on the right.

The analyses to the pollen diagrams of Nörbølling Boring 19, Brørup Hotel Bog, Solsø, Duedam I, Hørup and Kollund are wholly or in part made by SIGURD HANSEN and KELD MILTHERS under the superintendence of KNUD JESSEN, to whom the remaining pollenanalytical work is due.
